

Monthly Average Cost of Redispatch

Per FERC Order 890 (P1162) and 18 CFR § 37.6 (j)(2)(2008), the Transmission Provider must post on OASIS (i) its monthly average cost of planning and reliability redispatch, for which it invoices customers, at each internal transmission facility or interface over which it provides redispatch service and (ii) a monthly high and low redispatch cost for the month for each of these same transmission facilities.

This document will serve to meet the posting requirement until such time that NAESB develops new OASIS functionality and any new business practice standards for posting the monthly average cost of planning and reliability redispatch.

To date, no customer has been invoiced by Southern Companies for any redispatch costs and as such there are no postings at this time.
