

Third Party Offers for Planning Redispatch Services

Per FERC Order 890 (P1004) and 18 CFR § 37.6 (j)(1)(2008), the Transmission Provider must allow the posting on OASIS of any third party offer to relieve a specified congested transmission facility.

This document will serve to meet the posting requirement until such time that NAESB develops new OASIS functionality and any new business practice standards for posting of third party planning redispatch services.

To date, no third party or network customer offer has been received by Southern Companies to relieve congestion through planning redispatch services. Third parties or network customers interested in posting an offer for redispatch services should contact Southern Companies' [Transmission Services Manager](#).

Seller Name	Price	Congested Transmission Facility
None	N/A	N/A
